REMARKS

Claims 1, 14, and 45 have been amended to clarify that the predetermined time is less than a frame time in light of the Examiner's comments in cipher 1 on page 2 of the Action. However, claim 44 has not been so amended. Claim 44 is different from Dingwall in the configuration of connection of the holding capacitor. According to the present claimed invention, the holding capacitor connected between a gate electrode and a source electrode of the drive transistor. On the other hand, the holding capacitor in Dingwall is connected between a gate of the drive transistor and the ground point. Therefore, claim 44 also has novelty over Dingwall. With these claim changes and above comments, it is believed that Dingwall is no longer anticipatory of any of the claims.

The indicated allowability of claims 4-12, 17-25 and 43 over the art is noted, with thanks. However, in view of the foregoing amendments and comments, it is believed that all of the claims are now allowable.

Entry of the foregoing Amendment and allowance of the application are respectfully requested.

In the event further fees or charges are due, the Commissioner is authorized to charge our deposit acccount (or credit any overpayment) to our Deposit Account Number 08-1391.

Respectfully submitted,

Norman P. Soloway
